

RESCUERUNNER OPERATOR TRAINING

SAFE AT SEA / SAFE AT WORK

"A chain is never stronger than its weakest link". RescueRunner is a craft that is easy to operate and it takes you to places and into situations other boats cannot access. Safe at Sea's training programs focus on teaching well-proven, safe, efficient, cost-saving operation/rescue techniques and that the operators learn both how to

utilize the RescueRunner to the utmost but also how to maintain and service the boat. We offer a variety of training courses, customized to your needs and working environment. The courses are aimed at Search-and-Rescue Professionals using RescueRunner in the ocean, lakes, swift water or in flooded areas.

Maneuvering techniques

Access narrow and shallow areas

Emergency situations

EXPERIENCED INSTRUCTORS

The Instructors of Safe at Sea are well experienced in real life rescue missions. All are active rescuers. Over the years we have trained over one thousand RescueRunner Operators.

The instructors have conducted RescueRunner training courses all over the world in different conditions and work closely with the client when customizing onsite courses.

COURSE CONTENT

- Before and after use procedures
- Alarms - how to understand them and act
- Emergency signaling
- Risk analysis and scenario planning
- Cost saving operations
- Demands on the driver/operator
- Operating in head sea/ following sea/ side sea
- Capsizing/rightening
- Rescuing of conscious/unconscious casualty
- Rescuing from rocks and beaches
- Boarding other vessels
- Basic maintenance and service
- And much more

The location for our courses is the island of Käringön, a beautiful outpost off the Swedish West Coast. It is the perfect spot for search-and rescue training as the harsh environment and tough weather conditions provides the right scenarios for practicing difficult missions and situations that happen in the daily work of the operators.

SAFE AT SEA OFFERS YOU NOT ONLY A PRODUCT BUT A TRUE PARTNERSHIP

Our way of working always starts by learning to understand your operational challenges and together identifying your specific needs. The aim is to develop a customized Search-and Rescue system involving launch-and-recovery solutions, personal equipment, training & operational procedures etc.
